Ōtautahi Foraging Manual

Introduction

This manual is for foragers to learn to use the app and its features, and for stakeholders to set it up locally.

Ōtautahi Foraging is an application designed primarily for nutrition conscious individuals and hobbyist foragers. Users are expected to range from beginner foragers who will be aided by help menus and guidelines to more experienced users who can ignore these and continue use. The purpose of the manual is to explain the basic use of the application: navigating the map, adding notes to journals, and using the recipe page.

This well help with:

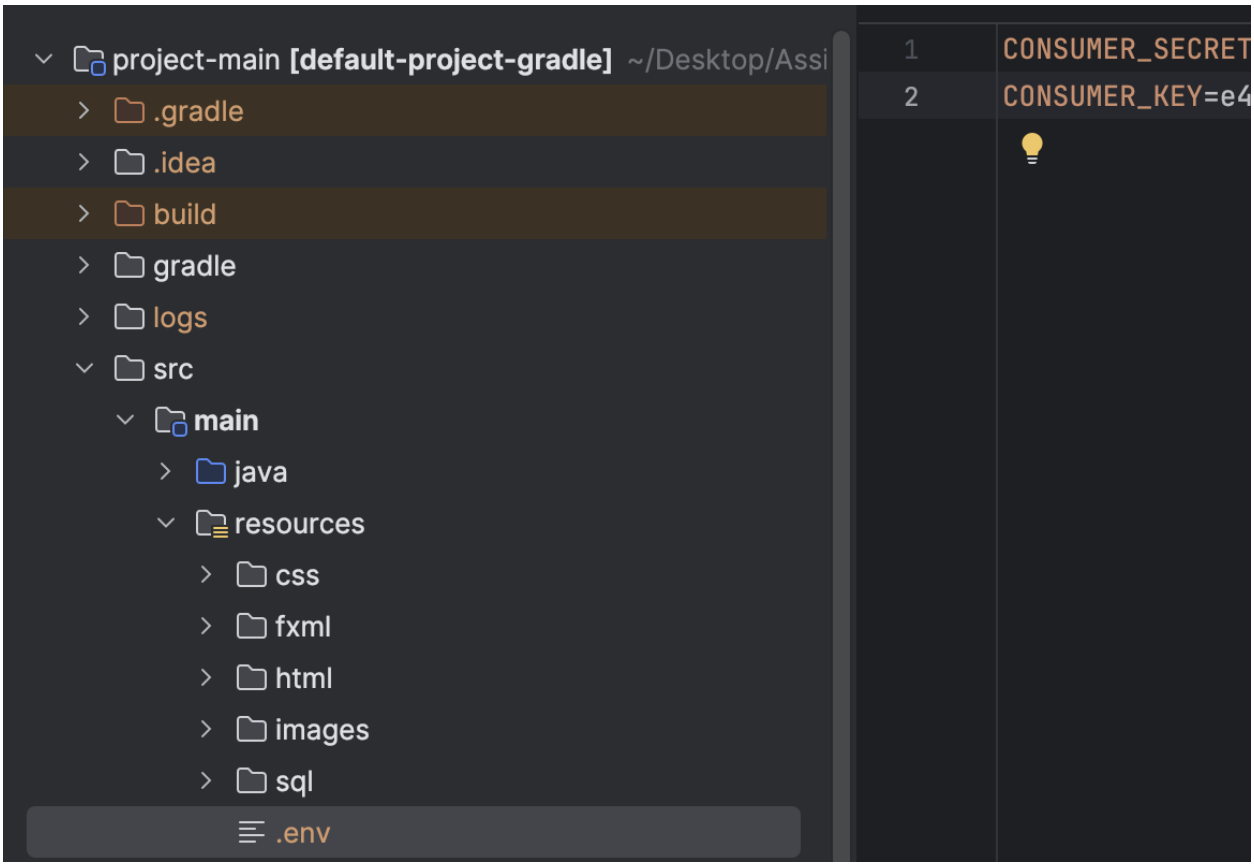

- Browsing the map for trees
    - Understanding what to look for
        - Keys for markers and filter buttons
    - Filtering
- Journalling your foraging
    - Adding a note to a tree
        - Adding an image
    - Editing a note
    - Browsing your notes
        - Finding the tree a note is about on the map
    - Delete a note
- Finding a recipe
    - Finding recipes with food from a tree on the map
    - Filtering recipes
- Customising the appearance of the app
    - Choosing dark mode
    - Text accent colour pick
- Other
    - Navigating to table view

- Help

Set up

To use ./gradlew run you must have this .env file in the app. Src/main/resources/.env

Find the full .env file contents on Mattermost under Team 4 Teaching Comms

To run from JAR

```
java -jar seng202_team4-1.0-SNAPSHOT.jar
```

Browsing the map

Understanding what to look for

When browsing the map you will see markers representing trees. These have icons representing food that you will find on them

There are different icons representing clusters of specific food trees which uses the same colour for that type of food map marker colour

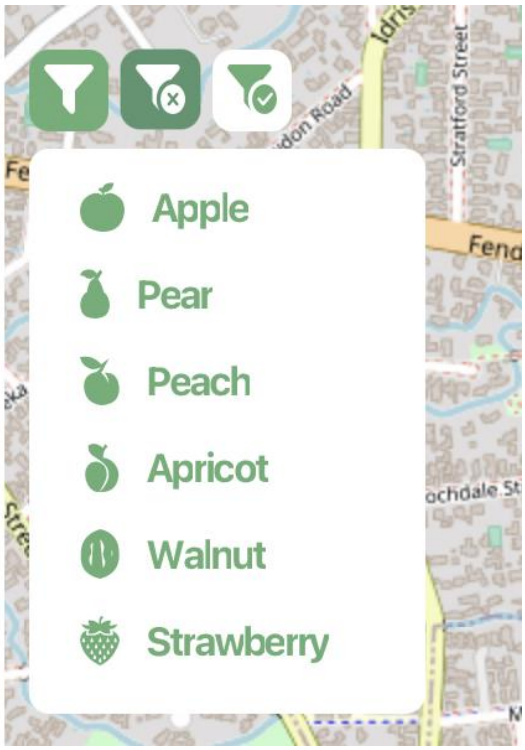

Filtering

If you want to filter the trees you are seeing

1. Press the filter icon in the top right
2. Select which trees you want to see
    a. You can press the select all or deselect all buttons
3. Your map will now only show trees of that type. This works the same way throughout the application
